SAG informally requested assistance to complete disinfestation building at new quarantine station. This requires design and installation of four large autoclaves approx 300 cuft each and boiler. Building including showers and dressing rooms nearly completed. Estimated cost of equipment $50,000. Is our estimate correct?

We are planning to request competent engineer or engineering firm to come here to design and supervise installation of equipment. Between design and installation, engineer may be of assistance on design and installation of ice plant, laundry layout, etc. but this not envisioned in present project.

Since speed urgent, advisable engineer be on contract basis probably for one year.

Project agreement to be prepared with SAG and WHO covering this project, when formal request received if TCA/N agrees. SAG very interested and since quarantine station used by pilgrims consider project urgent. Letter follows with fuller information.
